

How to test **PicoPop** without any printed material

PicoPop turns a child's colored-in drawing into a short animated film. In normal use, an adult adds a physical PicoPop book, the child colors a page, and the adult scans it. For this review you don't need to print or color anything — use the test book and the pre-colored image below.

✓ No account, no data collected

The scanned photo never leaves the device. No sign-up, no tracking, no ads.

General audience

Not “Made for Kids”. An adult operates the app; the child just watches the film.

Test content included

A private, unlisted test book you add with the QR code below — it never appears publicly.

— Step by step

1 Add the test book

Open the app → **SCAN** tab (the camera opens directly) → point at **QR 1** below. “TEST BOOK (REVIEW)” is added by itself to **My Books** on the Home tab, with a download ring on its card — wait for 100 %.

This book is published but **unlisted** — it never shows up publicly; this QR code is the only way to add it.

2 Open the coloring

From **Home**, open **TEST BOOK (REVIEW)** → tap **TEST COLORING (REVIEW) – T REX** to reach the scan screen.

Shortcut: **SCAN** tab → point at **QR 2**: the test book is added automatically and the scan screen opens straight away.

3 Import the pre-colored image

On the scan screen, tap **Import a picture** and choose the provided file **TEST-COLORING-REVIEW-T-REX.png**. The four corner markers (small square targets) are detected automatically.

By design, importing a picture with no markers is refused — only a genuine PicoPop page can be scanned (a random photo can't).

4

Watch it come to life

The colored T-Rex animates into a short film. You can save it to the in-app gallery and share it with the system share sheet.

— QR codes

QR 1 — REQUIRED

Add the test book

SCAN tab → point at the code

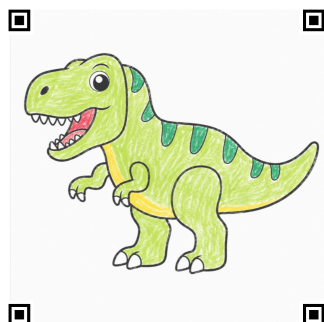

QR 2 — SHORTCUT

Open the coloring

Jumps straight to the scan screen

— Image to import (step 3)

TEST COLORING (REVIEW) – T REX, pre-colored

Import this image on the scan screen to trigger the animation — no camera, no printing needed. The four black corner markers let the app rectify the page.

— Notes for the reviewer

Privacy. The coloring photo stays on the device — it is not uploaded or stored. For a few animations the image is sent over HTTPS to an image-processing service that handles it in memory and does not keep it. Full policy: picopop.app/confidentialite.

Business model. PicoPop books are physical products; the app is free and animates the pages a child has colored. The test book above lets you experience the full flow without a physical book.

Camera permission. Used only to scan QR codes and photograph a coloring page; the video stream is never recorded. On this review path you can use image import instead of the camera.

Language. The app follows the device language automatically — it is in English on an English device. It can also be switched anytime under the ≡ menu → "Language".
